

THE CONCORDANT MEGAWORLD

An Atlas of Continents, Kingdoms, Gates, and Roads

Compiled from the Founding Compact, the settlement chronicles, the WorldField, and the authored world-lenses of Concordia. Worlds are not separate games. They are continents of one living universe.

Plate I — The Concordant Megaworld, Year 91 After Compact. Hub at the Heart. Gated civilizations on the Canon Ring. Sere across the Exodus Ocean.

I. Lore Spine — What the Worlds Actually Are

Concordia is one persistent megaworld. Named “worlds” (Hub, Tunya, The Grid, The Sundering, Iron Coast, Aegis, Sovereign Ruins, The Crucible, The Frontier, Sere) are regions — continents and civilizations — inside a single spatial field. Geography is generated once from a world seed and is not allowed to regenerate on revisit. Settlements are historical objects: founding writes a row that is never deleted; abandonment only changes status. Memory lives in the settlement chronicle and the world-consequences graph.

The metaphysical spine is Refusal. Concord catalogs. Concordia creates. The Sovereign refuses. The First Great Clash was mediated by the Shadow DTU. The Concord Link is the lattice that binds the continents so they can be observed, walked,

and traded across — not a cluster of instanced maps. After the Great Refusal, the Three-Day War at Broken Spire, and the Truce, Concordant Law made the Hub a neutral heart: no conquest of the city-state, gates inspected, walkers licensed.

Sere is the wound the rest of the map exists to explain. It is Earth worn thin by eight centuries of extraction — the world where no Refusal ever held. Seven arks fled it. Time-dilated transit scattered the arrivals across generations on Tunya. Everything downstream (Hub Compact, Link, Refusal Field, even the Crucible's drift) is aftershock of that Exodus.

Hub civic history (compact years)

- **Year 0 — Founding Compact.** Scholars' Guild, Merchant Collective, Iron Wardens, and Shadow Network agree that no single power will control what Concordia knows or forgets.
- **Year 12 — Eight Refusals codified** by the Verdant Veil.
- **Years 45–52 — Trade Wars** between northern and southern merchant houses.
- **Year 61 — Great Purge.** Seventeen Scholars' vaults burned. Official story: rogue arsonist. Hidden: Warden Commander Voss, Merchant price-fixing.
- **Year 68 — Night of Whispers.** The Cipher leaks a partial vault manifest.
- **Year 73 — Second Drought.** Verdant Veil retreats. Salt-route tariffs explode.
- **Year 74 — Gate Crisis.** Wardens seal the gates eleven days.
- **Year 80 — Pinewood Crossing.** Three brothers hold the crossing; two fall; Kael returns.
- **Year 91 — Present.** Cold equilibrium. Archives half-rebuilt. The Network still holds proof. Strangers keep arriving.

II. Cosmography — Continents of the Canon Ring

Hub sits at the origin of the WorldField. Gated civilizations occupy a Canon ring around the Inner Veil Sea. Influence is modeled as overlapping Gaussians with transition bands. Effectiveness in a region is native strength × local physics × home-field presence × adaptation floor — applied to people, armies, creatures, and gear alike. Sere has no stable Link gate.

1. Concordia Hub — the Heart

Theme: fantasy city-state · tech pre-industrial · magic moderate · biomes plains, forest, highland, water. Walled concentric capital divided into Council Chamber (resonance stone, Compact signatures of all four founders), Archive Quarter (Founding Archive Terminal, Scholars' Guild), Market District (the humming Market Well), and the Warden ring-wall. Outside the walls: Pinewood Crossing on the salt road; Broken Spire on the north shore (site of the Three-Day War); Upper Grove of the Verdant Veil; Three Refusals Tavern. Kingdoms do not tile the Hub — the Compact forbids a single crown. Power is four-way and exhausted. Dungeons: the burned vault-underlevels of the Purge; the sealed inspection tunnels from the Gate Crisis; the root-cellars of the Veil grove.

2. The Sundering — high-magic continent (north)

Theme: classic sword-and-sorcery · magic abundant · biomes plains, forest, highland, mountain, water. Ambient fields so thick a wizard channels them directly. Tech from the Grid or Iron Coast has nothing to grip. Powers: House Voss (Voss Estate Mirror — the continent's cleanest gate), Wildwood Circle (Listening Oak, blood-rune rootnet), dragon holds in the high peaks, orc and goblin marches in Thornwood. Landmarks: Dream Pool (slow dream-mail), Elder Grove, Voss Estate. Dungeons: wyrm-nests above the snowline; demon-cut barrows; the oak's remembered-message catacombs.

3. The Frontier — mesh continent (northeast)

Theme: peer-mesh frontier · scattered-modern · low magic · biomes plains, forest, highland, water. This is where the Concordant Web actually works: walker journeys, federation handshakes, human-scale anchors. Settlements are small. Quests are deliveries across a mesh you cannot see, only trust. Landmarks: Windbreak Relay, Farpost Cairn, Scout's Knot. Roads are Walker Paths, not highways. Dungeons: abandoned mesh-cairns that still route; refusal-blind hollows where a walker

vanished.

4. Tunya — ark-arrival continent (east, largest)

Theme: post-arrival pre-industrial · rare bloodlines · seven biome kinds across every kingdom. No electricity has ever been made to work. Fire-bloodlines forge; ice-bloodlines heal. Native Tunyans (Nil) predate the arks. Vrellan were already incoming. Vessine crashed Year 11. Kingdoms (canon): Masond (first African arrival, cliff city, Hold of First Arrival), Asbir (southern dunes, Curated Vault), Corre (North American walk-off), Sahm (African-American diaspora), Bahijj (Indian-cultural cohort), Dinye (Australian interior, 409 Demand, Gate Treaty), Dormas (import kingdom), Fluxom (harbor, dye war, slide toward tyranny), Aekon (South American stranded ark, glacier, Ice Oath, Long Winter), Nil (closed inner grove, root-whispers), Sangree / Sandrun Sanguire (fire clans), Akeia (tide-honoring), Vrellan + Vessine Isle, Cactem Strip, Ancient Tunyan Ruins. Dungeons: dead ark hearts, the missing deletion-log of Asbir, Nil's refusal-field grove (outsiders unwelcome), Aekon crevasse-holds, Cactem last-raid markers.

5. The Crucible — drift continent (southeast)

Theme: lattice-born experimental land · high unstable magic · six biomes that do not stay put. Every region is a progen answer to a real drift alert in the corpus. Quests compose themselves about every fifteen in-game minutes. Landmarks: Ember Gate, Slip Gate, Veil Gate, the Rifts. Dungeons: contradictions given geography — a quest that is also a place.

6. The Grid — cyber continent (south)

Theme: neon megacity · near-future · magic only as trace leak from the Sundering. Kael's Zero Collective owns the Mainframe Root Node (reads every message that passes). Blackout Resistance built the Blackout Dead-Drop specifically because Kael cannot see it. Glitch Chapel is an abandoned sanctuary whose AR overlay fused into a Veil resonator — public, garbled, beloved. Districts: Mainframe, Under-District, Neon Arc. Dungeons: air-gapped stacks, drone-killed arterial loops, the Chapel's undercroft.

7. Iron Coast — crime continent (southwest)

Theme: noir modern city · no magic, no bio-powers. Guns go deeper here than anywhere else. Iron Rose Syndicate (Mama Delgado's kitchen radio — the cleanest criminal gate), Ghost Network (moving dispensary under a freeway), Maria's Tattoo Parlor (ink as passive Veil receiver). Landmarks: Iron Rose Estate, Dockside Warehouses, River Market. Dungeons: syndicate under-kitchens, overpass dead-drops, river-tunnel smuggler vaults. Cross-world: the Unit Betrayal lore bleeds into Aegis / Luminary.

8. Aegis — superhero continent (west)

Theme: modern metropolis rewritten at the biological level. Purple shadow-reasoning, red-gold plasma. Magic does not work. Luminary Empire (Vesper Kane) logs every message through Kane Tower Comm Array. Enforcers' Movement holds the Phantom Node Elias seeded in the 72-hour awakening. Public Neural Clinics are cheap and watched. Districts: Kane Tower Complex, Bronx Arterials, Low-Rent Grid. Dungeons: tower sub-levels, awakening crater, clinic black-sites.

9. Sovereign Ruins — archive continent (northwest)

Theme: post-collapse classical city that remembered everything and could not refuse. The city did not burn. It quieted. Archives still write. Spells still cast. Almost no one remains to read. Three half-conscious archivists. The Sovereign Refusal Archive is the monument to the moment refusal became possible. The Founding Compact of the Hub cites the Cascade as the reason refusal became a right. Refusal Field is dense; many actions are glyph-gated. Dungeons: still-serving stacks, glyph-locked wings, the quiet streets themselves.

10. Sere / Corrupt Earth — the isolated homeland (far south)

Theme: late-extraction industrial. Ten biomes: Old Capital, Spire City, Furnace Belt, Breadlands, Flooded Lowland, Drowned Provinces, Contested Passes, Offshore Haven, River Delta, highland. The Tessera is not a cabal — it is the shape capital takes when it survives generations. Lampfuel (Black Tithe) sold only for Marks; Marks issued from nothing by the Tally House; wars that must not resolve because resolution ends the revenue. Factions: Tally House, Clearing Spire, Curtain, Open Table, House Aldermere, Verge Dynamics, Dovrane, Keshar, Hollowford Seed, Almsfolk, Lamplighters. The First Launch Cradle in the Unbound Provinces is the umbilical to Tunya — last manifests of who boarded and the longer list of who was refused a berth. The Misfiled Shelf in the Curtain's stacks is a leak that looks like an error. Veil stability 0.4. No Crown Road reaches here.

III. Concord Link — Portals, Not Teleports

Ordinary regions do not teleport. Fast travel exists only at core-civilization Link gates. Crossing a gate is walking into another civilization of the same universe. Walkers can be hired to carry a message physically between worlds — a courier economy, not a loading screen. Veil stability varies: Hub 1.0, Aegis 0.95, Sundering 0.9, Iron Coast 0.85, Grid 0.75, Tunya 0.6, Sere 0.4.

Plate II — Concord Link network: anchors, Crown Roads, sea lanes, walker paths, weak gates.

Named anchors (canon)

- **Hub:** Council Chamber Resonance Stone (stability 1.0) · Founding Archive Terminal (0.95, Scholars) · Market Well (0.85, public).
- **Tunya:** Hold of First Arrival / Africa ark core, Masond (0.85) · Curated Vault / Asbir ark (0.7) · Listening Grove of Nil (0.95, closed) · Vessine Resonance Choir (0.55).

- **Grid:** Mainframe Root Node (1.0, Zero Collective / Kael) · Blackout Dead-Drop (0.9, resistance) · Glitch Chapel (0.55, public, garbled).
- **Iron Coast:** Iron Rose Kitchen Radio (0.95) · Ghost Chip Dispensary (0.8, moves Tuesdays) · Maria's Tattoo Parlor (0.7).
- **Sundering:** Voss Estate Mirror (1.0) · Listening Oak (0.95) · Dream Pool (0.7, arrives next dream).
- **Aegis:** Kane Tower Comm Array (1.0, logged) · Phantom Node (0.9, Enforcers) · Public Neural Clinic (0.8, watched).
- **Sere:** First Launch Cradle (0.6) · Misfiled Shelf (0.35).
- **Frontier / Crucible / Ruins:** mesh cairns, drift gates, Refusal Archive — infrastructure more than monuments.

IV. Roads, Sea Lanes, and Trade

The Crown Roads are the gated ring-highway: each spoke runs from a Hub gate-house across a Veil-bridge or ferry to the receiving civilization's gate-city, then inland. They are inspected since Year 74. The Salt Route is older than the Compact — Hub market to Pinewood Crossing and out along the north shore toward Sundering timber and Veil herbs. Walker Paths web the Frontier; a hired walker is slower than a gate and cannot be read by Kael. Trade-sea lanes cross the Inner Veil Sea between Hub quays, Fluxom harbor, Iron Coast docks, and Grid canals. The Exodus Ocean to Sere is not a commercial lane. Crossing it is pilgrimage, smuggling, or suicide.

Principal cargo by spoke

- **Hub ↔ Sundering:** reagents, timber, blood-ink, House Voss correspondence, dragon-bone (illegal).
- **Hub ↔ Tunya:** solar-charged ark shards, fire-forged iron, ice-preserved medicines, Nil silence (not for sale).
- **Hub ↔ Grid:** tech-parts (scarce in Hub), neural-jack time, blackout radios, glitch-relics.
- **Hub ↔ Iron Coast:** guns, attachments, ghost chips, syndicate favors, River Market cloth.
- **Hub ↔ Aegis:** logged comms, clinic implants, Enforcer samizdat via Phantom Node.
- **Hub ↔ Ruins:** unread books that still write themselves, glyph-keys, quiet.
- **Hub ↔ Frontier:** letters carried on foot, mesh handshakes, cairn repairs.
- **Hub ↔ Crucible:** drift reports, contradictions, quests that should not exist yet.
- **Tunya ↔ Sere (umbilical only):** the same terminals boot on both sides of the Exodus. Manifests. Names of the refused.

V. Dungeons and Named Sites (playable layer)

- **Broken Spire** — Three-Day War wreck. Enforcer and Luminary scars still in the stone. Cross-world dungeon.
- **Purge Vaults** — seventeen burned Scholar archives under the Hub. Some still smoke in the chronicle.
- **Hold of First Arrival** — dead Africa-ark heart fused into Masond cliffs. A woman's voice four generations gone.
- **Curated Vault** — Asbir ark. Archive boots clean. The deletion log is the dungeon.
- **Nil Inner Grove** — closed. Pierce the refusal-field and you hear every conversation Nil has had since the arrivals.
- **Aekon Glacier Holds** — Ice Oath country. Long Winter never fully left.
- **Mainframe Root / Under-District** — Kael sees one; Nyx built the other so he would not.
- **Glitch Chapel undercroft** — religion that became a resonator.
- **Iron Rose under-kitchen** — the radio is the boss.
- **Kane Tower sub-levels / Phantom Node crater** — logged power versus unlogged awakening.
- **Sovereign Refusal Archive** — a monument that is also a lock.
- **First Launch Cradle** — gantry field. Who boarded. Who was refused.

- **Misfiled Shelf** — one true thread left un-buried on purpose.
- **Crucible Rifts** — a dungeon that rewrites its own floorplan from live drift.
- **Walker cairn-tombs** on the Frontier — abandon ≠ delete. The path still remembers the walker.

VI. How to Use This Map in the Sim

Hierarchy the kernel already believes: Megaworld → continents → regions (world_ids) → kingdoms/republics/tribes → provinces → settlements → neighborhoods → buildings → inhabitants. Kingdoms emerge from ownership, force, geography, and diplomacy — they are not menu-painted borders. Crossing a gate changes local physics (skill affinities, material availability, magic/tech floors) because the WorldField changed, not because a new save file loaded. If a place is abandoned, keep the row. If a walker dies, keep the tomb. If a road is cut, the chronicle records the cut. That is the map. The drawing is only the plate.

Cartographic office note. Plates invent arrangement (ring sea, spoke roads, Sere isolated south) to make the authored worlds legible as continents. Place-names, factions, anchors, biomes, and the Compact timeline are taken from content/world and docs/CONCORDIA_PERSISTENT_MEGAWORLD.md. Where the seed has not yet grown a castle, the atlas marks the field and waits.
